

CONCEPT ANALYSIS: THEORY, PRACTICE AND METHOD

2 December 2021 - 5.30 – 7.00pm GMT (UK)

Online panel discussion – virtual environment

Concept analyses (CA) are performed so that clearer and more focused understandings of key ideas in nursing can be achieved. It is anticipated that these improved understandings can beneficially inform practice and research, and this form of analysis has, and will continue to play, a significant role in the nursing literature. CA is not, however, one thing. New approaches and perspectives on this activity are emerging, and while numerous examples of CA are published, debate about the nature, methods, and value of this work is growing. Capitalising on this interest, Elisabeth Bergdahl, Beth Epstein, Georgina Morley, and John Paley here critically explore and discuss different aspects of CA's past, present, and future.

This panel discussion/debate will be of interest to students, educators, researchers and clinicians who read, make use of, and construct CA.

Contributions:

Elisabeth Bergdahl, Örebro University
Concepts in relation to theory and Philosophy of science.

Beth Epstein, University of Virginia
Gaining insight on NICU end of life through two concept analysis lenses

Georgina Morley, Cleveland Clinic Lerner College of Medicine
CA that is not CA (moral distress, an example)

John Paley, University of Worcester
CA, methods and philosophy

This event is free to attend but it is essential that places are booked via our [online link](#)
